

**Over the River and Thru the Woods at The River
Maze**
Earth Science and Weather

- 1 **Question: Fog is a very low kind of what cloud?**
Right: Cirrus
Left: Stratus
Straight: Nimbus
- 2 **Question: What country's Hudson Bay region actually has lower gravity than the rest of the earth, possibly because of convection in the mantle or as a hangover of the ice age?**
Left: Canada
Right: Mexico
Straight: Russia
- 3 **Question: The 1896 edition of the International Cloud Atlas defined ten types of clouds. Reputedly, what kind was cloud nine, since it was the highest cloud?**
Left: Cumulonimbus
Right: Centaurus
Straight: Camelopardalis
- 4 **Question: A butte might once have been a mesa. What would either one be?**
Left: A dry gully
Right: A flat-topped hill
Straight: A spire of rock
- 5 **Question: In 2005 Hurricane Vince became the first tropical storm to ever hit what continent's mainland?**
Straight: South America
Left: Australia
Right: Europe
- 6 **Question: Which of these disasters is characterized by shearing force?**
Right: Earthquakes
Straight: Floods
Left: Hurricanes
- 7 **Question: Typically found in deserts, ventifacts are scarred as wind blows around sand or ice crystals. What are they?**
Right: Abandoned cars
Left: Rocks
Straight: Trees

- 8 Question: What causes those disastrous tidal waves, better known as tsunamis?**
Left: Seismic activity
Right: Surface winds
Straight: Lunar gravity
- 9 Question: Gravity from the moon, and to a lesser degree the sun, slosh the oceans around. What is this sloshing called?**
Straight: Echoes
Left: Waves
Right: Tides
- 10 Question: It's not a rap term. It's a desert that is actually a dry lake bed. What is it?**
Right: Crib
Left: Playa
Straight: Bling
